

10K & 12K WIDE INGROUNDS

MODEL # EW10 & EW12

Our new wide inground lifts provide the **necessary drive-through clearance for servicing wide-bodied, exotic, and electric vehicles.** 3-Stage arms allow for more efficient vehicle spotting, and **90% more under-car clearance allows easy battery removal and installation in modern electric vehicles.**

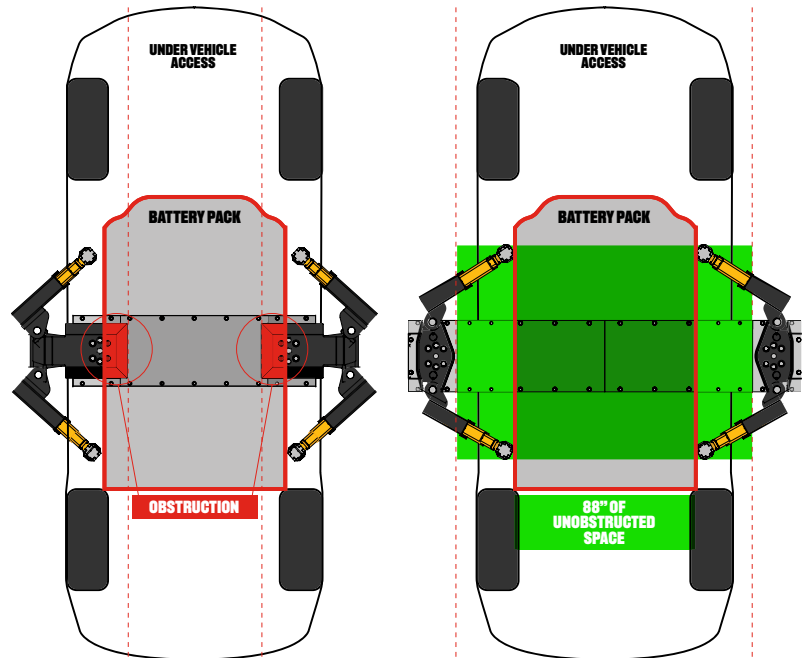

REQUIREMENTS

-  **12' MINIMUM**
-  **12' RECOMMENDED**
-  **24' RECOMMENDED**
-  **208-230V, 1PH, 30A**
-  **90-120 PSI**

EV SERVICE

The left image shows our current inground design, where the bolsters will not allow you to remove most vehicle's battery packs.

The right image shows the new wide design which gives the technician enough clearance to easily remove and install the battery or battery packs.

WIDER. LATER.

We offer the option to install our standard 10K and 12K (EV) ingrounds in our NEW wide (EW) tub. **This allows you, in the future, to upgrade to the wide version, without the expenses of cutting concrete and doing a complete retrofit installation.**
